

Multiplication

Introduction to Multiplications

Description:

Teacher gives Boomwhackers or simple percussion instruments to 4 students. They all stand in a line. Teacher asks them to tap 3 times the instrument one after the other. The rest of the classroom counts first time each number (123, 123, 123, 123). Then teacher asks the students to tap from the first tap till the end and write the number. Students should count from 1 to 12. Then students discover that 4 kids tapped 3 times each and that equals to 12 taps in total.
